Beginning German Language Learning Tool

Technology #203217

Wende Web-based German Language Learning Tool

Wende is a "Beginning German" college curriculum that consists of a textbook, a corresponding workbook and culturally relevant, web-based, interactive, learning activities. These materials are integrated to help students learning german to gain listening, reading, speaking, and writing skills, while the content familiarizes them with contemporary German culture.

Informed by current research in Second Language Acquisition and foreign language education, the German language curriculum’s design recognizes that students need to build broad language proficiency skills. Wende incorporates practice of language learning strategies so that students have the confidence to use German independently. For teachers, Wende offers both a classroom-friendly presentation of content and an extensive technology complement that supports innovative, student-centered instructional practices.
