Bluestem Variety

Schizachyrium scoparium 'MinnBlueA' little bluestem "Blue Heaven™" is a unique form of little bluestem, a native prairie grass known for its tolerance of sites with dry soil and full sun. It is a great plant for low maintenance sustainable landscapes. Several characteristics make this carefully selected variety attractive through all seasons. It has a taller, more upright form (40-48 inches tall and 25-30 inches wide) than is typical of little bluestem. The colors of Blue Heaven™—dark blue to burgundy foliage during the summer turning purple, violet, and finally red in the fall—are unique on a tall columnar plant. It flowers in August and September, and showy fall color extends into winter.

Please see the [University of Minnesota's website](#) for more information about the Blue Heaven ornamental grass. You will need a license to sell Blue Heaven plants commercially. A license is completed online by clicking on link to the right.
