Applications

- Educational tool

Technology Overview

Tooth decay is the number one chronic infectious disease among children in the U.S. Researchers at the University of Minnesota have developed a worksheet for parents, caregivers and social workers to better understand and remember helpful tips for taking care of their child's teeth and mouth health. The worksheet is a one-page (front and back) document that outlines ways to care for a child's oral health based on three stages: birth to 2 years, 2 to 5 years, and school age. This document was created by the UMN School of Dental Hygiene and the Adoption Medicine Clinic.

For any questions about the use or translation of this document, please contact iac@umn.edu.

Phase of Development

The worksheet has been completed and is in its final stage.
