Applications

- Interprofessional skill development for preceptors and health professionals

Technology Overview

Researchers at the University of Minnesota have developed the WILD Series™ (Workplace Interprofessional Learning and Development). This innovative preceptor development offering allows health professionals the opportunity to develop knowledge and skills around key interprofessional competency areas that can be directly applied in the clinical learning environment.

Participants build interprofessional skills as a preceptor and health professional through 5 actionable weekly emails and a 1-hour group debriefing session. Each weekly email offers an engaging 3-5 minute video, instructions to observe, engage, and model concepts in practice, key reflective prompts, and ways to learn more. The debriefing session is a chance to learn with, from, and about colleagues from a myriad of health professions.

The WILD Series™ is intended for personal use only. If you are interested in commercial use, please contact us.

Phase of Development

The WILD Series™ is a fully developed professional development program.
